

SUPRAX

Cefixime

Suprax is a brand name for the antibiotic medication cefixime. It is in a class of antibiotics called cephalosporins and is used to treat a variety of bacterial infections.

Suprax works by interfering with the formation of the bacterial cell wall, ultimately leading to the death of the bacteria.

DRUG USES

Some common uses of Suprax include:

Respiratory Infections: It can be prescribed to treat respiratory tract infections like bronchitis and pneumonia.

Ear Infections: Suprax may be used to treat ear infections, particularly in children.

Urinary Tract Infections: It can also be effective in treating urinary tract infections (UTIs).

Throat and Tonsil Infections: Suprax may be prescribed for throat and tonsil infections, including strep throat.

Gonorrhea: In some cases, it can be used to treat certain sexually transmitted infections like gonorrhea.
